

## VIDIZMO enables The Hartford to train and communicate with employees through video

With more than 200 years of expertise, The Hartford is a leader in property and casualty insurance, group benefits and mutual funds. The company is widely recognized for its service excellence, sustainability practices, trust and integrity.

Looking for a solution to securely stream live and on-demand video, VIDIZMO enabled the company to stream videos across their internal network to enable communication and provide training to their employees. EnterpriseTube solved their challenges by enabling them to securely stream, manage and share videos on an integrated platform with tools such as quizzes for knowledge checks and access controls for ensuring privacy and security.

## EnterpriseTube

### Customer Challenges

The company needed a platform where they could stream live and on-demand videos to their employees to communicate important news and transfer knowledge for claims processing.

In addition to streaming corporate information and sharing information with specific groups within their larger group of employees, they wanted to leverage videos for training and conduct knowledge checks to see how much information employees retained.

The solution needed to be deployed on-premise with extensive security options to prevent unauthorized individuals from accessing the platform or content and carrying out certain actions and activities.

### Partner Solution

EnterpriseTube provided a video portal accessible only by employees where the company could stream live and on-demand videos across their internal network. The platform integrated with Wowza servers for live streaming.

The platform allowed them to create quizzes and insert them into their training videos to test their employees. Additionally, they were able to live stream corporate news and messages to their large number of employees with low latency.

User groups allowed them create groups of employees to share specific videos only with specific employees while role-based access control ensured only authorized employees were able to upload, manage and share videos based on their role in the organization.

EnterpriseTube also provided them with a flexible solution that could be deployed in on-premises servers, as well as on the cloud or in a hybrid model in case they decided to migrate data to the cloud in the future.

VIDIZMO provided seamless live and on-demand video streaming experiences for corporate communication and training.

The company was able to create and insert quizzes into their training videos for conducting knowledge checks.

VIDIZMO provided them with the flexibility to deploy the solution on their on-premise servers, and on the cloud in the future in case they wish to migrate.

They company was able to control access and share videos with specific groups of employees and control who could manage, moderate or share videos through role-based access control.
