

Energy | Creating an Internal Video Knowledge Base

To power life around the world, there are numerous complex processes involved in the energy sector every day. The complexity of these processes is compounded with our aim to shift to more cleaner and innovative solutions. Given this complexity, documenting and sharing internal knowledge **securely** is of utmost importance for energy companies.

However, sharing knowledge through means of text is outdated. No one likes reading long manuals anymore and 'video' is the new way forward! And keeping the power of video in mind, one of our energy sector customers has started using our platform to **create their own internal YouTube**. Where employees are empowered to upload and share their expertise through an easy yet convenient solution.

VIDIZMO EnterpriseTube

Customer Challenges

Sharing knowledge through text and in online meetings wasn't just effective. They needed a collaborative platform where employees can watch videos on-demand to learn at their own pace and schedule.

The information shared internally is highly confidential, a breach of which could lead to competitive disadvantage. Hence, they needed a platform that adheres to the highest levels of security.

The organization wanted to start small and roll-out to more departments and use cases over time.

Our Solution

VIDIZMO EnterpriseTube offers organizations their own YouTube-like library where contributors can upload videos. Logged-in users can then conveniently watch videos from any device or browser. They can comment, like, attempt quizzes and do much more.

VIDIZMO EnterpriseTube offers [numerous security features](#), and can be deployed in secure Azure, AWS or on-premise datacenters. The platform is trusted by large government organizations such as the US State Department.

VIDIZMO EnterpriseTube is highly scalable, and organizations can easily add users, storage and other components. You can even create new portals and sub-portals for separate departments or use cases.

Create separate autonomous portals for each department to segregate content and delegate portal management

High-quality live and on-demand video streaming optimized for various devices and bandwidth conditions

For each video – choose who can access them. Select users, groups, departments, the entire organization or the public

Automatically transcribe videos and translate these transcriptions into more than 50 languages
